

YOUR FOREST IN A CHANGING CLIMATE

What can you do?

#1 Know your woodlot

Whether you have owned your woodlot for many years, or are new to managing a woodlot, the most important factor to adapting your woodlot to be more resilient to climate change is knowing what is there. Once you establish what you have, you can work towards what you want it to become.

We recommend contacting your local Marketing Board and having an evaluation done. A forestry professional can help you create a silviculture management plan you can refer to for years to come.

#2 Get informed and stay informed

We don't have all of the answers, but the NBFWO is partnered with many local, provincial, and federal groups that have the latest data and information that you need to make smart decisions about your woodlot. We keep listings of useful webpages that can provide you with the information you need, or can help you find what you are looking for.

Go to the '*Building Capacity of NB Woodlot Owners to Adapt to Climate Change*' website (off the www.nbwoodlotowners.ca website), or scan the QR code on the left.

There are links to various tools and resources – including informational videos and a link to 'Projected Climate by EcoRegion' – a great tool for looking at the projected conditions for different areas of New Brunswick.

#3 Don't wait, start now!

"The best time to plant a tree is 20 years ago. The second best time is now." - proverb
